Learn the fundamentals of flight required for your FAA Private or Light Sport Pilot license. Content includes pertinent FAA regulations, principles of aerodynamics, airplane systems and performance, instruments, aero-medical and human factors, aviation weather, airspace, airport operations, charts and navigation, cross-country flying, and the various aviation career opportunities.

Upon successful completion of this course and completion of an online exam-prep study course, you will be furnished with the knowledge to complete the FAA written knowledge test. This course will be taught by several local Flight Instructors with years of aviation experience in a variety of aircraft.

Classes will be held in a combination of in-person and online presentations, with several tours available to expand your aviation knowledge. All are welcome to attend, whether you're just interested in learning about aviation or actually want to pursue flight training or a career.

FAA Airman Knowledge Testing (written exams) are now available at Nicolet College in Rhinelander through PSI.
