

IT-Web Programming and Development Certificate

The expansion of the World Wide Web has created a number of occupations related to the design, development, and maintenance of web sites and their servers. Web programmers, web developers, and web designers are responsible for site creation, design, and day-to-day maintenance. They may also address performance issues such as speed of access and content management. Web programmers and developers may work for technology businesses, organizations who conduct business via the Internet, or as self-employed contractors working independently.

Nicolet's IT Certificate programs provide students with a broad knowledge of computer systems and technologies and strong problem-solving and analytical skills. Students are prepared to obtain jobs in business and industry where database management and the Internet are integral to an organization's business operations.

Technological advances in the computer field come so rapidly that continuous study is necessary to keep skills up to date. Our Information Technology programs provide the continuing education required to keep pace with current and future trends in information technology. Students are trained in data analysis, backup systems, database security, website development, and web server maintenance.

Certificate Courses

10-152-120

Introduction to Programming (3 credits)

10-152-131

C # Programming (3 credits)
